

CHILD SAFETY MONITORING AND NOTIFICATION

PROBLEM STATEMENT:

Mr.Ramesh is a 30 year old man. There are three members in their family. In that family their is an one girl child. They were living in the city the girl child usually go the school by the cycle . He wants to find the problem for their daughter. Not only she all girl childrens are facing this problems.

- Ramesh wants to find the solution to the all the family
- Ramesh family wants a alert message if their children is in the problem.
- Mr. Ramesh and the family members needs to know the result immediately.

Who does the problem affect?	Childrens,Parents.
What are the boundaries of the problem?	Childrens who are facing the strangers during the outside.
What is the issue?	Children cannot complain about abuselements which they face in their daily life to their parents
When does the issue occur?	During the school time childrens who have aware of strangers meet in the outsides

Where does the issue occur?	The issue occurs in school or some were in the outside
Why is it important that we fix the problem?	All childrens must be safe in the future
What solution to solve this issue?	Build a system which can notify the parent about their child's status to monitor the childrens from the strangers and using the different IOT sensors
What methodology used to solve the issue?	A smart IOT device for child safety and tracking is developed to help the parents to locate and monitor their children and precautions that can be taken for those issues.
